

## Tool: Sample Physician Preference Card for Surgical Procedures

At New York-Presbyterian Hospital, physician preference cards allow the centralized sterile processing department to “case pick” all of the supplies, instruments, and equipment needed for the day’s surgical procedures and deliver them via case carts to the procedure rooms.

Each preference card spells out precisely what materials are needed, depending on the procedure and the physician. Hospital leaders plan to expand the use of preference cards to nonsurgical procedures such as interventional radiology and endoscopy, which will help them reach their goal of reducing the cost of supplies and average case times by 10 percent.
