# CRH Strategic Decision Support Journey

## Early

- DSS Selection
- Staff Development
- Tools Development
- Training
- Engagement
- Governance (tight)

## Emerging

- Integrated Data
- Stakeholder Dashboards
  - Analysis
  - Market Intelligence
  - GEO Coded Data
- Governance (flexible)

## Mature

- Non-EMR, Nonpatient-Centered Data Lakes
- Social Determinant of Health Analytics
- Predictive Analytics
- Cultivate Story Tellers

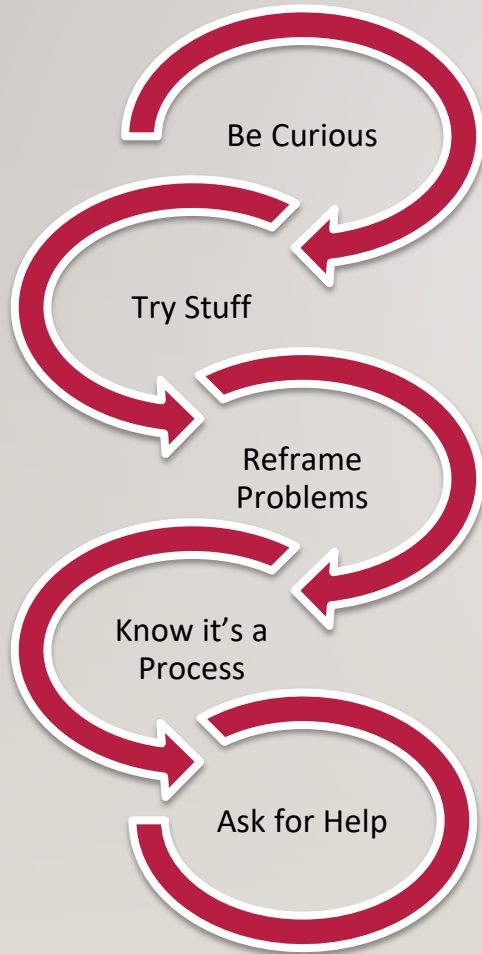

# Rules of Decision Support Engagement

- **Data Integrity** – a DBA with teeth
- **Data Governance**
  - Standardized definitions
  - Access to the rabbit hole
  - Final word – there is a sheriff in town
- **Stakeholders**
  - Designing Your Success
  - A deliberate break from IT- or Finance-centric objectives
  - Building trust

# Collaborate with Stakeholders

based on *Designing Your Life* by Dave Evans & Bill Burnett

# **Stakeholder Problem Solving**

**Data Audits & Compliance**

**KPI Dashboards**

**Populations of Interest**

**Community Benefit**

**Business Development**

**Presentations**

# Cost of Emergency Psychiatric Care

Emergency Room patients typically track along a bell curve when it comes to an ED charge, acuity and volume, meaning most patients fall in the middle between a Level 3 and Level 4 charge.

Patients with a primary diagnosis of Psychfall heavily on the highest level of acuity and cost. This additional cost is not fully covered by insurance payors.

Either we raise our rates, (not likely to increase payment) or introduce lower levels of care to reduce time held in the ER.

# Cost of Emergency Psychiatric Care

Emergency Room patients typically track along a bell curve when it comes to an ED charge, acuity and volume, meaning most patients fall in the middle between a Level 3 and Level 4 charge.

Patients with a primary diagnosis of Psych. fall heavily on the highest level of acuity and cost. This additional cost is not fully covered by insurance payors.

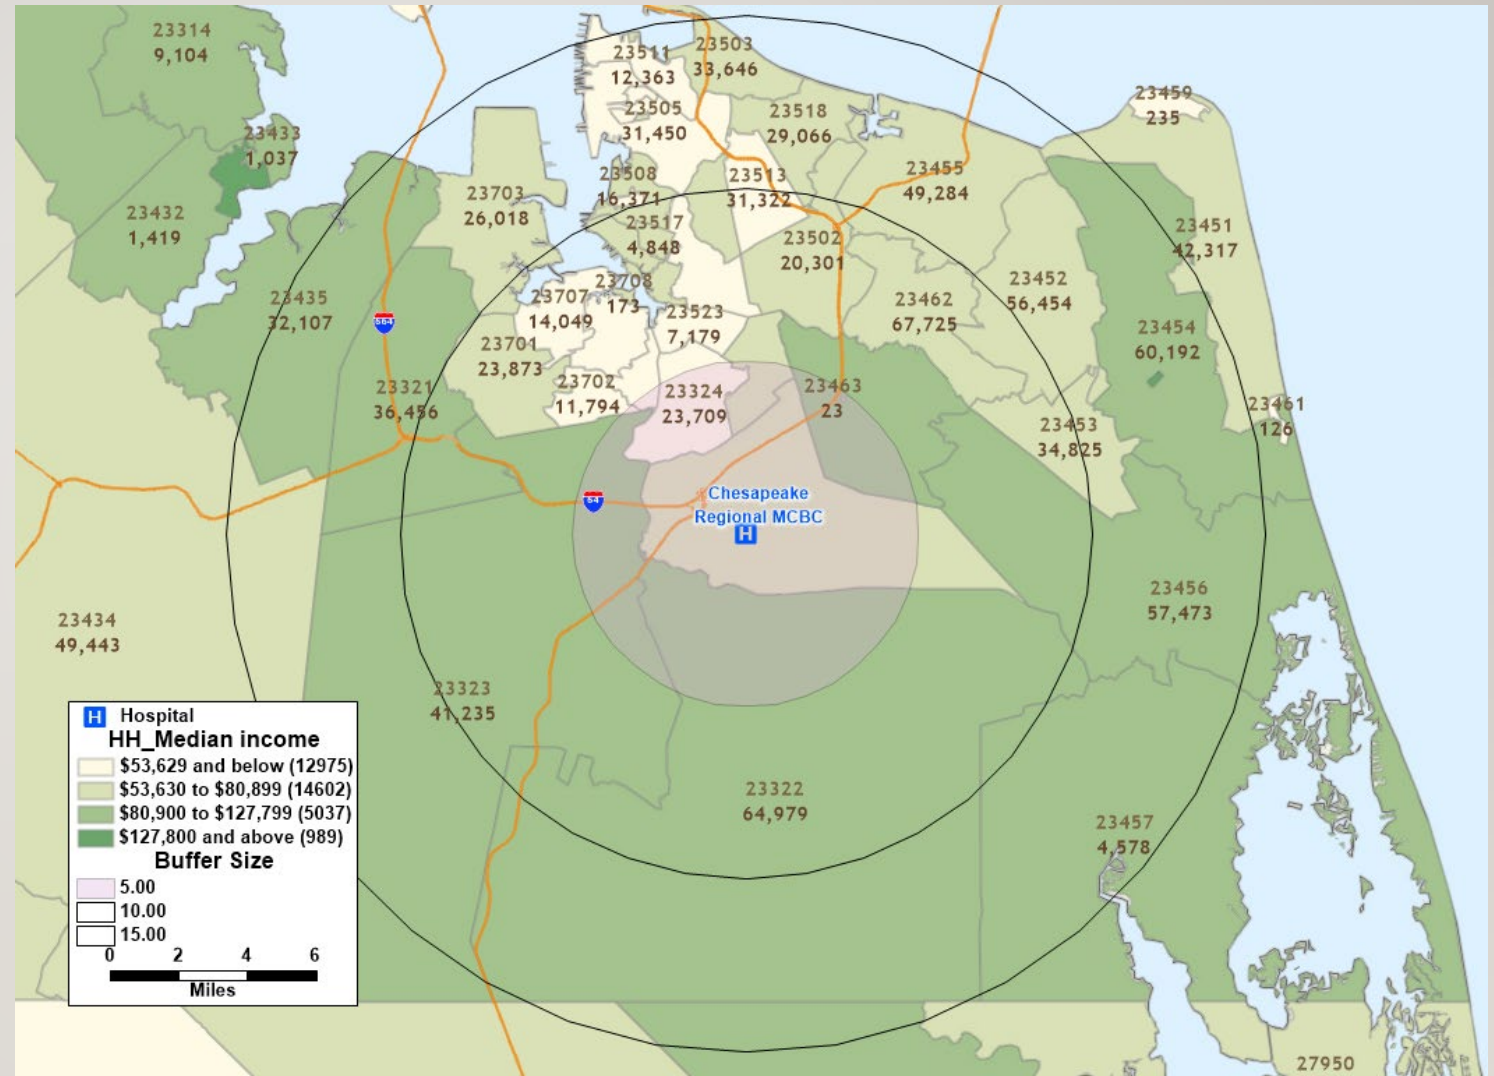

Either we raise our rates, (not likely to increase payment) or introduce lower levels of care to reduce time held in the ER.

# Income Disparities by ZIP Code

Where are our most vulnerable patients and how do we find them, especially those in the shadows?

Plot high ED frequency in Planning District, and other hospital trends of social disparity—age, race, sex, income.

Attend informal community groups.

# Income Disparities by ZIP Code

What did we learn? How far they travel for hospital medical services and what modes of transportation do they use.

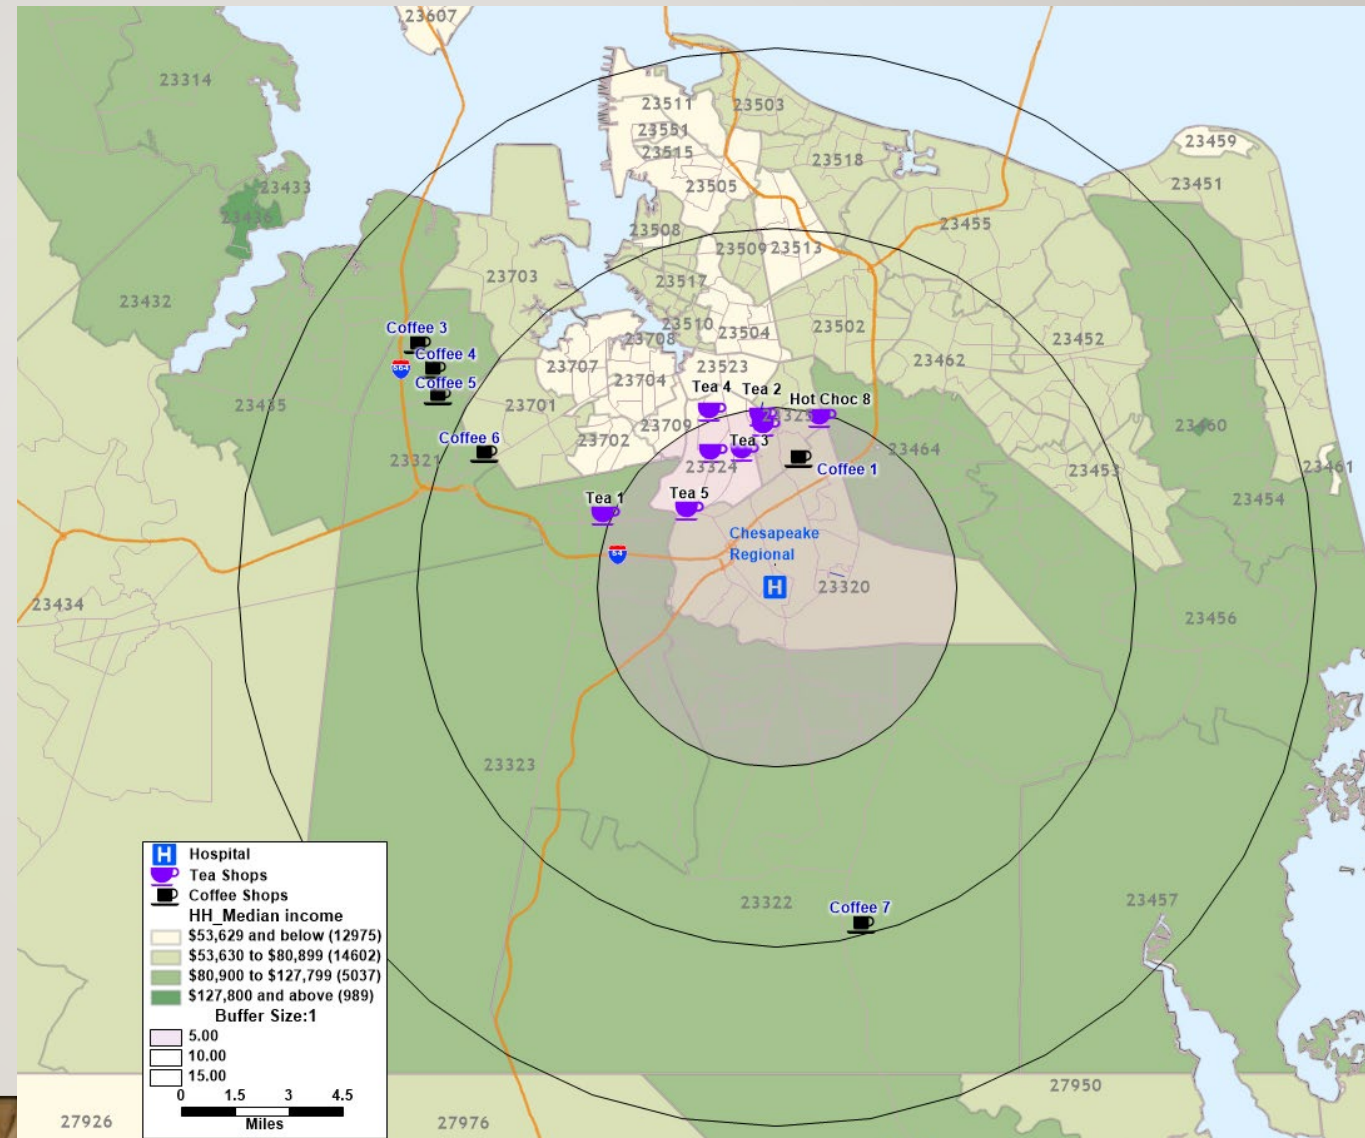

What they need in their community:

**Coffee shops & food stops**

**Primary care**

**Urgent care**

**Mobile services**
