

Medical Coding Simplified.

About Nym

Nym is the leader in transforming clinical language into actionable information, which can remove inefficiencies that add billions to the cost of care. By combining industry-leading technology with clinical expertise and a deep understanding of medical language, Nym is able to accurately decode medical charts in a way that is fast, explainable, and compliant across multiple specialties in both outpatient and inpatient care settings.

The Nym engine translates provider notes within patient charts into diagnostic and billing charge codes in a matter of seconds, with over 95 percent accuracy and absolutely zero human intervention. Nym's medical coding engine also delivers audit-ready, traceable documentation for every code it generates, ensuring total visibility into coding rationale. Nym's solution can be quickly deployed and scaled based on volume and workflow needs, easing administrative burdens and allowing clinical teams to spend more time focused on patient care.

At Nym, the future is bright. Our engine currently processes over 5.5 million charts annually in more than 250 healthcare facilities across the US, enabling clinical and administrative teams to spend more time focused on patient care. We are backed by top-tier VCs and growing rapidly, with offices in New York City and Tel Aviv.

Education Session Offerings:

[The Future of RCM - Autonomous Medical Coding](#)

- Discuss the possibilities and limitations of an autonomous medical engine
- Discuss how AI is reshaping the future of medical coding

[How to Develop Your Autonomous Coding Playbook](#)

- Evaluate the strengths, and weaknesses of autonomous coding and learn the keys to optimal implementation and utilization
- Craft your autonomous coding playbook from capability evaluation to internal change management

[Autonomous Medical Coding In Action](#)

- Learn how to avoid costly implementation mistakes
- Valuable lessons learned from customer case studies
